

2-16 Zone Conventional Fire Alarm System 2.2kg CE Certification

Our Product Introduction

for more products please visit us on xfafiresafety.com

Basic Information

- Place of Origin: China
- Brand Name: XHA
- Certification: CE
- Model Number: XHA8016
- Minimum Order Quantity: 1
- Price: negotiable
- Packaging Details: 8pcs/carton
- Delivery Time: 3-7working days
- Payment Terms: T/T, Western union
- Supply Ability: 100000pcs/month

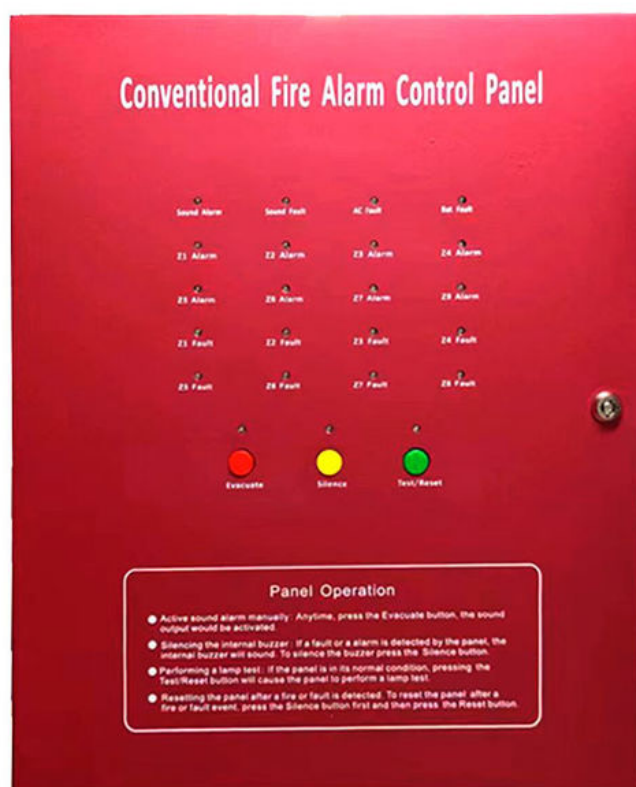

Product Specification

- Number Of Zones: 2/4/8/16
- Power Supply: DC24V
- Applications: Smoke Alarm System
- Compatibility: Compatible With Conventional Detectors
- Operating Temperature: -10°C To 50°C
- Type: Conventional
- Name: 16 Zone Conventional Fire Alarm System
- Highlight: 16 Zone Conventional Fire Alarm System ,
Conventional Fire Alarm System 2.2kg ,
2 Zone Fire Alarm System Conventional

Product Description

Conventional Fire Alarm System With 2/4/8/16 Zones And CE Certification

Product Description

Installation of the Conventional Fire Alarm System is simple and can be done on the wall or ceiling. This makes it easy to install the fire alarm system in any location, making it a popular choice for both commercial and residential buildings.

As a conventional fire alarm system, the Conventional Fire Alarm System uses a series of interconnected fire detectors to detect the presence of smoke or heat. Once the alarm system detects a potential fire, it will trigger an alarm to alert occupants of the building. This type of fire alarm system is designed to provide early warning of a fire, which is critical in ensuring the safety of everyone in the building.

The Conventional Fire Alarm System is ideal for use in a wide range of buildings, including offices, hotels, schools, and hospitals. It is also a popular choice for residential buildings, as it is easy to install and provides reliable fire protection.

One of the key features of the Conventional Fire Alarm System is its compatibility with conventional detectors. This means that it can be easily integrated into existing fire protection systems. Additionally, the use of conventional detectors ensures that the fire alarm system is reliable and effective in detecting potential fires.

In summary, the Conventional Fire Alarm System is a classic fire alarm system that is widely used in commercial and residential buildings. It is a reliable and effective fire protection system that uses conventional detectors to detect potential fires. Its compatibility with existing fire protection systems and ease of installation make it a popular choice for building owners and managers.

Technical Parameters

Product Attribute	Value
Type	Conventional
Power Supply	AC90-270V

Compatibility	Compatible With Conventional Detectors
Warranty	1 Year
Detection Method	Smoke/Heat
Installation	Wall Mount
Weight	2.2kg
Alarm Output	Sound/Light
Operating Humidity	10% To 95%
Certifications	CE

Support and Services

Our Conventional Fire Alarm System product comes with a range of technical support and services to ensure optimal performance and reliability. Our team of experienced technicians are available to assist with product installation, configuration, and maintenance. We also offer training and educational resources to help users understand the system and how to use it effectively. Our commitment to customer satisfaction means that we are dedicated to resolving any issues or concerns that may arise in a timely and efficient manner.

Product Range

Conventional Fire Alarm System
 Addressable fire alarm system
 Gas Extinguishing control system
 Beam Detector
 4 wire smoke detectors with relay output.
 2 wire Conventional smoke and heat detectors
 Explosion-proof flame detector for fire alarm system
 Standalone smoke detectors and combustible gas detector
